

## Key Benefits Of The MonaLisa Touch Treatment

MonaLisa Touch treatments offer an effective and convenient solution to counteract the effects of vaginal atrophy.

Key benefits include:

- Painless treatment
- Low risk with little or no side effects
- Suitable for almost all women
- Achieves long-lasting improvements
- Patients can return to normal activities immediately with no downtime
- Able to be used by certain patient groups who are unsuitable for hormone replacement therapy, eg. Breast cancer patients
- Most patients experience noticeable improvements after just one treatment

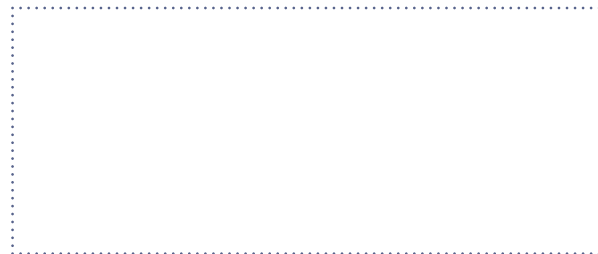

## Inspired By The Best In Anti-Ageing Laser Therapy

The inspiration for one of the most significant advancements in vaginal health has come from the laser that changed the way laser wrinkle reduction and skin texture improvement was performed.

The Smartxide 'DOT Therapy' laser has been used for many years for effective anti-ageing treatments on delicate areas such as the face, eyelids and neck. The advanced technology that allowed laser pulses to be tailored to each patient's skin type and body area has led to the development of this innovation in the treatment of vaginal atrophy.

The MonaLisa Touch treatment adds a new dimension to the treatment of this important health issue for women. It provides the ability to stimulate the natural regeneration of the vaginal tissue and counteract the physical and emotionally-draining effects of vaginal atrophy.

## A Breakthrough In The Non-Invasive Treatment Of Vaginal Atrophy

### A Revolutionary Treatment Creating Lasting Improvements For Women Affected By The Symptoms Of Vaginal Atrophy

- Vaginal Itchiness & Burning
- Dryness & Loss Of Lubrication
- Incontinence & Urinary Urgency
- Vaginal & Vulval Pain
- Painful Sexual Intercourse

## THE CHALLENGES OF VAGINAL ATROPHY

From the time menopause approaches a loss of estrogenic hormones can cause changes in the structure and function of the vagina.

The walls of the vagina lose collagen, become thinner and the natural elasticity and blood supply is reduced. The protective mucosa of the vagina can lose hydration and thickness, causing a loss of lubrication and changes in the natural balance of the internal environment. This can cause symptoms such as:

- Vaginal itchiness & burning
- Incontinence & urinary urgency
- Dryness & loss of lubrication
- Vaginal & vulval pain
- Painful sexual intercourse

These symptoms can have a negative effect on your general well-being and, in many cases, place stress on your intimate relationships.

### Existing Treatment Options

Currently the most-common treatment of vaginal atrophy requires an ongoing application of hormone replacement creams directly into the vagina. For a variety of reasons some women are not able to use these creams, become uncomfortable with this process or are irregular with the application and eventually discontinue use.

Without an effective solution these women are forced to alter their lifestyle to cope with the symptoms.

## Stimulating Natural Regeneration With Laser...

### A Light-Based Solution To Help You Feel Like You Again...

In the past, laser procedures for gynaecology were largely reserved for invasive surgical procedures. The MonaLisa Touch treatment has transformed the application of this technology to create a procedure that is minimally-invasive and available to almost all women.

MonaLisa Touch is the first solution designed to naturally counteract the effects of hypotrophy of the vaginal mucosa. By stimulating the regeneration of new vaginal tissue MonaLisa Touch restores your body's natural balance and function.

You can begin to feel like you again...and rediscover the confidence to live the lifestyle you choose.

## HOW MONALISA TOUCH WORKS TO RESTORE FUNCTION AND BALANCE

The MonaLisa Touch treatment is a fast and effective treatment that uses hundreds of tiny pillars of laser energy to stimulate the natural regeneration of the vaginal tissue.

In as little as 30 days after treatment the regeneration of new tissue in the vaginal walls builds a naturally stronger structure and the protective mucosa recovers volume, hydration and elasticity - all without the side effects of traditional treatments.

### Convenient Treatment - No Downtime

The MonaLisa Touch treatment takes around ten minutes. There is no downtime required after the treatment and you can return to your normal activities immediately.

### Are The Results Permanent?

All the changes obtained with the MonaLisa Touch treatment are long lasting. As the natural ageing process continues the treatment can be repeated as required.

### How Many Treatments Are Required?

Most patients feel an improvement after the first treatment with the full benefits of the MonaLisa Touch treatment achieved in three to four treatments. This can be decided in consultation with your Doctor.
