◆ How does V-touch work?

V-touch delivers RF energy via micro pinpoints beneath the skin's surface to create focal heat points directly at the source of the symptoms of skin imperfections. The healing process of these controlled thermal points leads to the regeneration of new collagen and skin cells. The result: revitalized, fresher looking skin.

◆ Who is a suitable candidate for V-touch treatments?

V-touch is suitable for all skin types, throughout the year.

◆ Are V-touch treatments safe?

Yes. V-touch treatments are safe due to Viora's SVC™ technology that brings together switching, vacuum and cooling mechanisms for more safety, control and comfort.

◆ When will I see results?*

Results are visible from the first treatment. Typically, a three-session initial treatment course is sufficient to achieve long-lasting results.

◆ Is the treatment painful?

No, pain is minimal. Some patients feel a slight stinging or warm feeling, depending on the treatment performed.

◆ How soon can I resume normal activities?

You can resume your normal routine and activities immediately.

V-touch skin tightening for a smoother, tighter appearance

◆ What is bi-polar RF skin tightening?

V-touch skin tightening treatment works to strengthen existing collagen fibers that have weakened over time. Bi-polar RF energy heats the dermis and stimulates collagen synthesis to improve skin laxity and reduce sagging.

◆ What areas can be treated?

V-touch skin tightening treatments are suitable for any part of the body.

◆ Is the V-touch skin tightening treatment safe?

Yes. V-touch is equipped with energy control mechanisms and a unique skin cooling feature for safe, effective treatments with no side effects.

◆ How long will it take to see results?*

The effects are visible immediately, though a course of three to six sessions is typically recommended to achieve long-lasting results.

*Number of treatment sessions required, and final results, may vary per patient.
